PROFILE

I direct agents on real work every day, and I teach the people around me to do it. I am not the engineer in the room and I do not need to be.

I have shipped AI products, I run a multi-agent practice on real work, and I have owned whether other people actually adopted what I built. At TIAA (Fortune 100, \$1.5T AUM) I spent fifteen years inside a regulated fiduciary business, most recently conceiving an AI-powered career development platform, leading the team that built it, and owning discovery, sequencing, governance with Risk, Compliance, and Legal, rollout, and measured usage. The enablement behind it was 30+ hands-on sessions I ran myself, not a launch email. On my own I conceived and directed two live AI products and designed the four-agent system inside one of them. My M.S. is in Instructional Technology, which is why I start with how someone learns to work differently rather than with a tour of the tool.

AGENTIC PRACTICE AND SHIPPED AI PRODUCTS

- **A multi-agent practice I run daily, not a demo:** Each agent holds a defined role and a named gate, including an adversarial reviewer whose job is to attack the output before it ships. Before changing which model each agent runs on, I wrote down what degradation would look like for each one and set a revert-first rule, so the failure criteria existed before the change did. The gates have caught overclaims on their way into live work, including one that had already cleared several review passes. They have also missed one. I own the result either way. I published the methodology behind this practice on LinkedIn in 2026.
- **Agent delegation and evaluation design:** TheHotSeat runs four agents on Claude (job analyst, question designer, live interviewer reactions, feedback coach) across eight panel presets, and I designed its delegation and prompt architecture.
- **joepointer.com, including the AI assistant on it:** Built entirely by me with no one else's hands on it. Per-employer personalization, a tailored resume, and an assistant answering questions about my background, all running in production.
- **CareerPointers (careerpointers.org), co-founder:** I conceived the product and designed an 11-module career journey, a four-agent AI interview simulator, an applicant CRM, and a portfolio that adapts to each employer, then directed AI to build it on Next.js, TypeScript, and Stripe. Four months from first commit to live. I owned what AI does not decide, including scope, named review gates before merge, and what we refused to ship, which included auto-apply and any fabricated match score. Mike Pointer is co-founder and engineered the production backend, the databases and security that made it real. Built and live, not yet opened to the public.
- **Future Me, Answered (futuremeansanswered.com), live:** I conceived it, designed the 5-stage discovery framework, structured the career data across 922 occupations, and built most of the application on Next.js and multi-provider AI. Mike engineered the production backend. FERPA-aligned, serving students, counselors, and parents on scoped access.

PROFESSIONAL EXPERIENCE

Director, Business Management

February 2022 - July 2026

TIAA (Fortune 100 Financial Services, \$1.5T AUM)

Business Manager (2016-2022) | Senior Business Management Specialist (2013-2016) | Business Consultant (2011-2013)

Owned the AI career development platform and the enablement behind it for the Client Services organization (~3,000 associates), partnering across HR, Risk, Compliance, Legal, Workplace Services, and IT.

Internal AI Products, Discovery Through Adoption

- **Took an AI platform from idea to company-wide launch:** Ran discovery with business teams, scoped and sequenced use cases by impact, made the call on what shipped in each phase, and owned governance, rollout, and measurement. Built for a transformation population first, then released company-wide to 16,000+ associates, and I reached 1,500+ of them directly rather than counting the ones who were merely given access.
- **Built the adoption layer into the product:** Shipped a Manager Guide, prompt guidance, and role-based materials alongside the platform rather than leaving uptake to a launch email, then measured active usage rather than headcount with access and reported that to senior leaders.
- **Built the first working version myself when speed mattered:** Built the platform's Manager Guide on Amazon Q Developer, an enterprise-approved tool, in one week against a months-long traditional path. Separately built my own replacement for the slide-production workflow rather than filing a request for one.
- **Cleared Risk, Compliance, and Legal without stalling the build:** Prototyped and pressure-tested first, then brought them in to set hard limits once it was worth building. No client data or PII entered into the platform, no AI-initiated actions, and guided prompts that keep the person in control of every decision.

Cross-Functional Discovery and Rollout

- **Built one operating framework across seven Client Services business areas:** Connected them through named liaisons, shared strategy, and peer learning so a single approach held across all seven, and set the operating rhythm, prioritization, and resource decisions that kept it running.
- **Ran 30+ hands-on sessions myself:** Workshops, demonstrations, town halls, and team sessions built around work people already cared about rather than a tour of the technology. The objection was rarely the tool. It was people protecting the part of the job that made them feel valuable.
- **Built and ran the Skills of the Future curriculum with a team of 7:** Five tracks of 12-17 modules on future, digital-first, and AI skills. 890 associates engaged.
- **Led workplace modernization for 3,000+ associates across six locations (2022-2024):** Owned change strategy through return-to-office, the Denver consolidation (44% footprint reduction), and the Frisco Corporate Center opening. Recognized as Change Champion.

Product Manager, Sales Engineer, Information Architect

2001 - 2011

Interactive Media / FT Knowledge / Pearson Performance Solutions / Vangent

A decade in enterprise software, advancing through instructional design, information architecture, project management, product management, and sales engineering.

- **Architected the Revolver LCMS content model:** Separated core content from contextual content so one source could publish as a full lesson, a field job aid, micro-learning, or an expert review depending on the user's context. Deployed at five Fortune 500 enterprises.
- **Worked directly with Fortune 500 customers:** Unilever, Bank of America, Verizon Wireless, GE Capital, Royal Bank of Canada, and Regions Bank. Scoped needs, ran sessions, and shaped multi-year implementation plans.

CAPABILITIES

Product: Internal Product Ownership | Discovery & User Research | Use-Case Prioritization & Sequencing | Roadmap & Tradeoff Decisions | V1 Prototyping | Success Metrics | Rollout & Adoption Ownership

AI Engineering Practice: Coding Agents (Claude Code, Amazon Q Developer, Kiro, GitHub Copilot) | Agentic & Multi-Agent Orchestration | Agent Delegation Design | Prompt & Context Architecture | Output Evaluation & Named Review Gates | Model Selection with Revert Criteria | Microsoft 365 Copilot | Responsible AI Governance

Enablement & Change: Curriculum Design & Facilitation | Cohort & Champion Networks | Communities of Practice | Reusable Playbooks & Patterns | Removing Adoption Blockers (Access, Acceptable Use, Fear) | Workflow Redesign | Executive Communication

Domain: Enterprise and Workforce Learning Technology (LCMS, LMS) | Regulated Financial Services (15 years) | Enterprise Software Delivery (LCMS, ATS) | SharePoint Governance at 200+ Sites

EDUCATION

M.S. Instructional Technology, Bloomsburg University, PA (4.0 GPA) | **B.A. Art**, Millersville University, PA

Certifications: Google Generative AI for Leaders | Lean for Financial Services, TIAA (inaugural class)
